

Difference between RX Carbon and RX Carbon+

RX CARBON

RX Carbon *does NOT have a built in* VHF antenna splitter. This makes the RX Carbon suitable if **no** already existing VHF antenna is on the boat.

In this case we must add 1 x VHF antenna.

RX CARBON+

RX Carbon+ does have a built in VHF antenna splitter. This makes the RX Carbon+ suitable to use if you **already have**, or is considering, a VHF radio w/VHF antenna. You just connect the VHF antenna to the RX Carbon+ unit. Then you connect the RX Carbon+ unit to the existing VHF radio.

In this case we do not have to add anything if a VHF antenna already is existing!!

NOTE 1!

Since RX Carbon and RX Carbon+ are receivers only, you do not need a GPS antenna unit to this system!!

NOTE 2!

Both RX Carbon and RX Carbon+ can send data to a PC and a plotter/radar – **at the same time!!**
